

NPCP LLC

National Photovoltaic Construction Partnership  
IMMEDIATE CALL TO ACTION

**IBEW LOCAL 180 MEMBERS' RESIDENTIAL SOLAR POWER PACKAGE**

- We believe we, NPCP.LLC, has found a way to offer each member an electrical solar system, - (power up your own home) - complete with a reasonable finance program – very low or no money down and a low payment per month.
- You would provide the labor and expedite the work. We anticipate there would still be some cost for your miscellaneous pipe, wire, and switches to a trade value of approximately \$600.00.
- This special package is really well engineered. The modules link into the integral roof mount. All parts are computer sized and computer C.A.D. drawings will be supplied, ready for your permit applications.
- A computerized list of all components assists each install. Since the Solar system will produce power for at least 25 years, your system will pay for itself several times over its useful life.
- NPCP.LLC would, on a best efforts basis, locate and assign all rebates and grants to your account, lowering the monthly cost.
- You would automatically gain the value of electricity saved per month. In most cases, we would anticipate your electrical savings for the above would come close to covering your monthly payment. Frankly, should this happen, it should be an automatic “go” decision. Even if there is a differential to pay, you need to take a hard look at the benefits.
- The installation value, should you install a 6 kw, could reach a \$40,000 home improvement. The monthly savings for the above system would be at least 85% of your present electrical payment and, of course, no increase in electrical rates, even if your Utility raised the rates.
- For those electricians that are located in a No grants or rebate area, we need you, to participate. You will be able to obtain a package of approximately 1000 watts for under \$7000 and \$2000 back from the feds therefore an estimated net cost = \$5000.
- Because NPCP.LLC will buy solar modules and inverters in bulk packages, these savings will be passed on.
- The intent is to supply – through volume - this top-notch solar package at prices low enough to permit I.B.E.W. members and I.B.E.W. contractors to compete across the board for Residential Solar. This program is our entrance back to the residential market.
- In addition, everyone participating would be eligible for a Federal tax credit of \$2000.
- Here is what to look for: south facing roof preferred (can be southeast or southwest). Get your available square footage and make sure the roof area picked has no shade. Take 10 watts per square foot and this calculation is the number D.C. watts possible.

Now, please fill out the form below.
